

GORDIUS Little Giant

the ultimate in MIDI control

We are proud to announce a new kid in MIDI town :
the **GORDIUS Little Giant Module (LG-M)**

This extremely powerful MIDI module is designed to be the perfect companion for the Behringer FCB1010 MIDI foot controller. It adds to the affordable and very popular floor board an unprecedented amount of flexibility and ease of use. Using this smart little engine, even the most complex setup can be controlled with the FCB1010, which was originally not designed to tackle this type of complicated control challenges.

Other supported floorboards are the Roland FC-200 and FC-300. When using these units in SysEx mode, the Little Giant Module responds to the Roland specific Sysex messages, and turns the floorboards into perfect slave controllers for the smart engine.

The integrated graphical display makes a huge difference in ease of setup, and also enables new possibilities, such as displaying set lists (with customizable font size for high visibility)

An integrated USB connection enables easy connection with a PC without the need for an external interface. An extra set of MIDI ports gives you the possibility to connect any MIDI device to your PC, and smoothly merge its MIDI messages with the messages generated by the floor board.

A few specifications:

- up to 250 banks of up to 32 presets (chaining several FCBs)
- up to 10 set lists containing up to 50 songs
- each preset can send an unlimited combination of different MIDI messages (PC, CC, Note, SYSEX, etc...)
- thanks to dynamic memory allocation, no strict limit on the number of MIDI messages per preset
- Connection for 2 external expression pedals, next to the built-in pedals of the FCB1010, FC-200 or FC-300
- Freely downloadable PC editor

For more details on the extended feature set, feel free to download the user manual from the GORDIUS website.

Other products in the GORDIUS Little Giant family are :

- the LG : a stand alone compact foot controller, combining the brains of the LG-M module with a set of rugged yet very responsive and silent foot switches.
- the LG-X : an extended version of the LG floorboard controller, containing 13 preset switches, arranged in a 1 octave keyboard layout.

A perfect companion for the FCB1010...

*... with extended connectivity :
USB, extra MIDI IN/OUT ports,
2 extra external expr.pedals,
2 extra external switches*

*The graphical display unlocks
unprecedented ease of setup
through built-in menus, ...*

*... but also allows displaying
set lists and much more*

GORDIUS is a small company, founded in 2007 with the mission to bring unique solutions for the most demanding musician. It is our commitment to design highly customizable MIDI control products at a reasonable price. For more information, visit our website at <http://www.gordius.be>
