

GORDIUS Little Giant

the ultimate in MIDI control

We are proud to present to you the GORDIUS Little Giant Module (LGM2)

This extremely powerful MIDI module is designed to be the perfect companion for the Behringer FCB1010 foot controller. It adds to the affordable and very popular floor board an unprecedented amount of flexibility and ease of use. Using this smart little engine, even the most complex setup can be controlled with the FCB1010, which was originally not designed to tackle this type of complex control challenges.

Other supported floorboards are the Roland FC-200 and FC-300. Specific 2-way communication turns the Roland floorboards into perfect slave controllers for the smart LGM2 engine.

The graphical OLED display makes a huge difference in ease of setup, and also enables new possibilities, such as displaying setlists with customizable font size for high visibility.

An integrated USB connection enables easy connection with a PC or MAC without the need for an external MIDI-USB interface. An extra MIDI IN port gives you the possibility to connect any MIDI device to your PC and smoothly merge its MIDI messages with the message streams generated by the LGM2 module.

A few specifications :

- Up to 1000 banks of 64 switches (chaining multiple FCBs) !
- Up to 1000 songs, organized in numerous setlists
- Each preset can send an unlimited combination of different MIDI messages (PC, CC, SysEx, Note, ...) on multiple channels
- Dynamic memory management allows for a huge number of MIDI messages per preset, with up to 4000 presets available !
- Connection for up to 4 extra expression pedals, or mono or dual footswitches, next to the built-in pedals of the FCB1010, FC-200 or FC-300.
- Freely downloadable editor, both for PC and for MAC OSX

For more details on the extended feature set of the GORDIUS products, feel free to download the user manual from the GORDIUS website : <http://www.gordius.be>

A perfect companion for the FCB1010...

... or FC-300 (even taking control over its display)

USB, MIDI IN and OUT, phantom power, 4 jacks for expression pedals or switches

The graphical display unlocks unprecedented ease of setup through built-in menus...

...and allows displaying setlists and much more

GORDIUS is a small company, founded in 2007 with the mission to create unique solutions for the most demanding musician. Since that time, GORDIUS has gained a grand reputation for its user oriented approach which resulted in the most powerful MIDI controllers on the market
